

# Fictious Airways

## Committed to flying safer

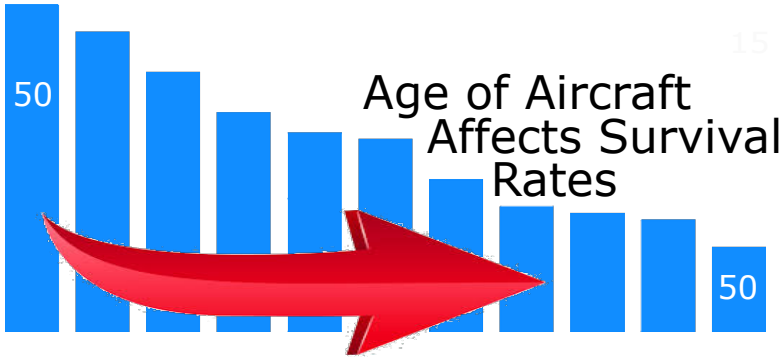

Fictious Airways has identified that the number of crashes and elevated loss of life has caused air travel to reach all new lows over the last few months. Fictious Airlines is taking actions to prove its commitment to safer air travel. To help display this commitment we are decommissioning three of our model aircraft.

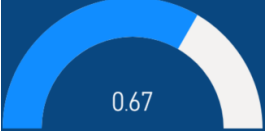

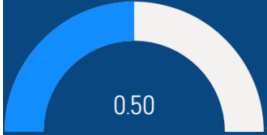

As a world leader in aviation we pride ourselves in our ability to fly our customers to domestic and international destinations. However in the same token, our safety record in fatalities over the years has allowed us to rethink ourselves. We want to ensure the safety of each and every passenger.

Not all aircraft are equal as some have high crash counts. However, have high survival rates. As in the case of the Boeing 737-200.

Overall Survival Rate from our current inventory of aircraft. After carefully analyzing our aircraft we have determined three models to be decommissioned from service based on the age of the aircraft and its history of crashes in conjunction with high counts of fatalities. Thereby resulting in increased safety and improving the survival rate.

### Aircraft Targeted to Decommission
